

• HUMANCHECK • VERIFIED HUMANS

Samples you can *defend* in peer review.

Verify each respondent is a unique, present human to ensure data quality. HumanCheck locks bots and repeat humans out before they ever reach your study.

HOW IT WORKS

1 A passcode per human

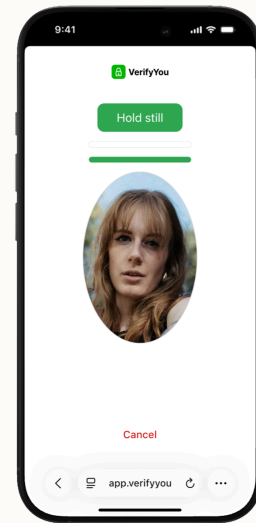

Each verified respondent receives a one-time passcode, created for their face alone and dropped onto their link. It fills itself in at your study's gate.

2 Fakes locked out

Bots and returning humans get locked out. A duplicate face never earns a second passcode, and a spent passcode is dead forever.

3 Pay only for real

You only pay for real, first-time respondents. Blocked traffic never enters your data and never gets paid.

✓ Into your study

✗ Bot or returning human: blocked

YOUR SETUP

1 Create your study

In Alchemer or Qualtrics, exactly as you normally would.

2 Add it to a verification

Two minutes in the VerifyYou dashboard. It mints the one-time passes for your study.

3 Share your study link

Everyone who reaches your questions came through the check.
