

• HUMANCHECK · VERIFIED HUMANS

Samples you can *defend* in peer review.

A five-second human check confirms every respondent is a real, live, unique person, so bots and repeat takers never reach your data. No PII collected, no IRB burden added.

BUILT BY HUMANS FROM

 Google  Reddit  Pinterest  LinkedIn  Airbnb  Robinhood  Accenture  Quora

Every respondent is human and unique

Respondents complete a HumanCheck in mobile web in seconds, keeping bots and fraudulent entries out of your sample.

One code, straight into your study

Each verified human earns a one-time pass that fills itself in at your study's gate on Alchemer or Qualtrics. No integration, no code.

Frictionless re-verification

When a respondent returns across waves, we confirm it is the same person in the background.

Private and anonymous

Images are never stored, and respondents never share an ID or any personal information to be verified.

Fast, affordable, and secure

Add trust to your research pipeline without the cost, liability or IRB friction of ID-based KYC.
